

## Trabajos Fin de Máster Promoción 17-19

	Títulos Trabajos Fin de Máster
1.	Development and in vitro characterization of a nes mucoadhesive gel containing chlorhexidine digluconate
2.	Estudio de compuestos como vectores no virales para terapia génica
3.	Development of an oral formulation based on the use of Nanoparticles. Optimization of the freeze-drying process
4.	Asiatic acid PLGA nanoparticles based hyaluronic acid hidrogel for topical delivery
5.	Puesta a punto de biorreactores single-use para realizar cultivos con células de mamífero en la industria biofarmacéutica
6.	Upgrade of the Pilot Plant Sterile Products Manufacturing Facilities: Design, Hazard Analysis and Clean air Technology
7.	Development and in vitro characterization of an inmunoconjugate for colorectal cancer treatment
8.	B-Lapachone liposomes for the treatment of Leishmaniasis
9.	Liposomes and nanoparticles of 17-AAG for the treatment of Leishmaniasis
