# Myocardial infarction risk determined by interplay of genetic and lifestyle factors

## YOUNG CANDIDATES FOR CORONARY HEART DISEASE

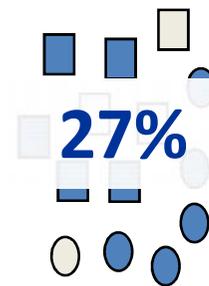

Menard M. Gertler, M.D., New York, Stanley M. Garn, Ph.D.,

and

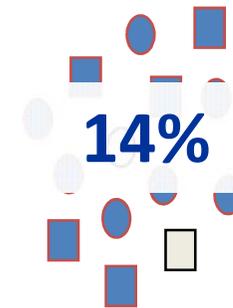

Paul D. White, M.D., Boston

JAMA (1951)

Family History

Cases  
N=100

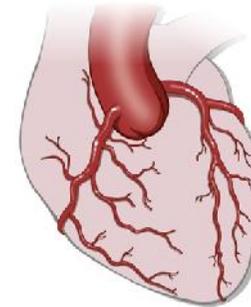

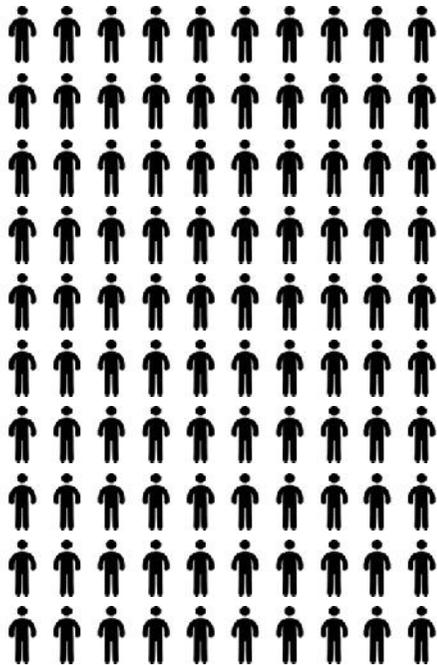

Controls  
N=146

# Clinical interpretation of genetic testing for heart attack risk

---

100 patients with myocardial infarction

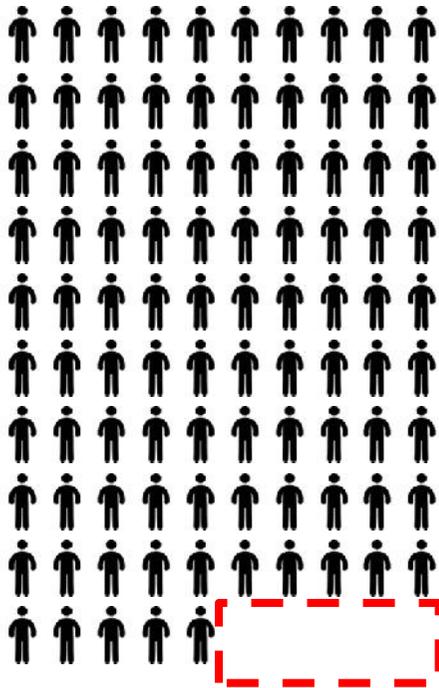

## Monogenic

- LDL cholesterol
- Triglyceride clearance
- Lipoprotein(a)

# A **monogenic** risk pathway mutation identified in **5%** of individuals presenting with myocardial infarction

100 patients with myocardial infarction

## Monogenic

↑ Risk

LDL cholesterol  
*LDLR, APOB*

**3.2-fold**

Triglyceride clearance  
*LPL, APOA5*

**2.3-fold**

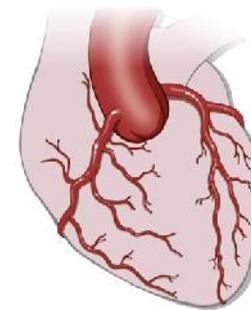

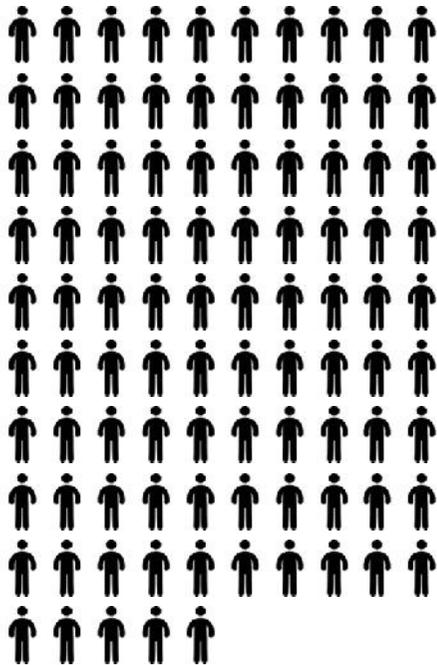

Lipoprotein(a)  
*LPA*

**2.8-fold**

# Clinical interpretation of genetic testing for heart attack risk

100 patients with myocardial infarction

**Monogenic**

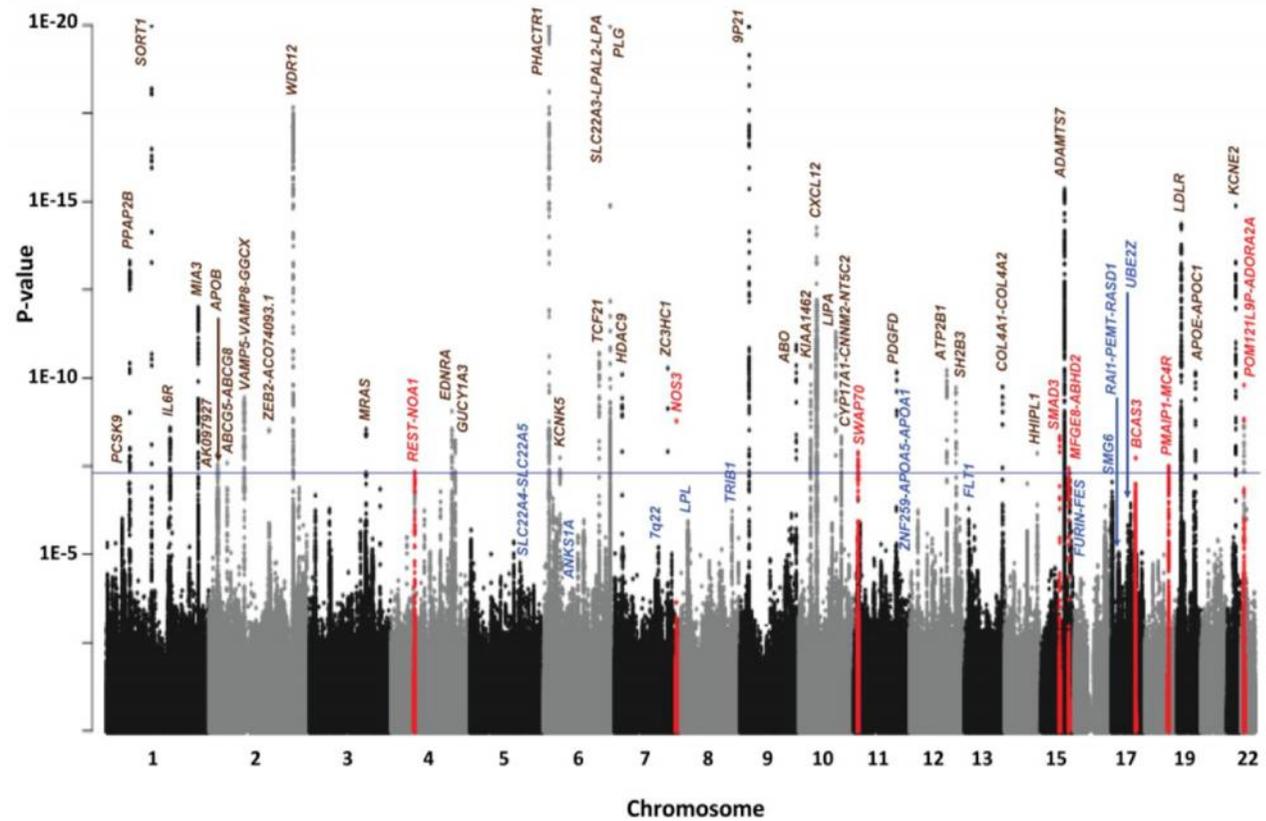

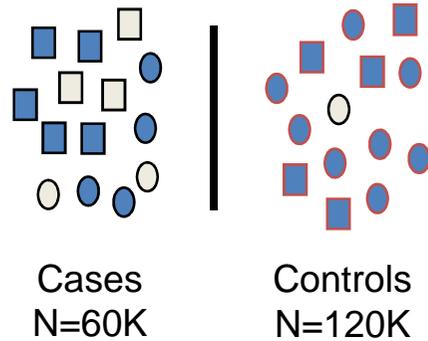

- LDL Cholesterol
- Triglyceride Clearance
- Lipoprotein(a)

**Polygenic**

**Polygenic Risk Score**

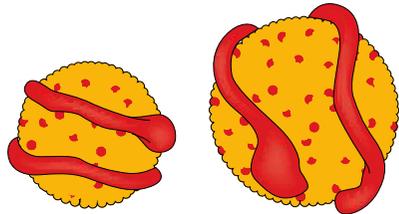

# >50 genetic variants associated with myocardial infarction

Kathiresan *Nature Genetics* (2009)  
 Samani *Nature Genetics* (2011)  
 Deloukas *Nature Genetics* (2013)  
 Nikpay *Nature Genetics* (2015)

# Genetic variants associated with myocardial infarction highlight **multiple underlying pathways**

---

LDL cholesterol and lipoprotein(a)

Triglyceride-rich lipoproteins

- *SORT1*
- *PCSK9*
- *APOB*
- *ABCG5-ABCG8*
- *LPA*
- *LIPA*
- *LDLR*
- *APOE*

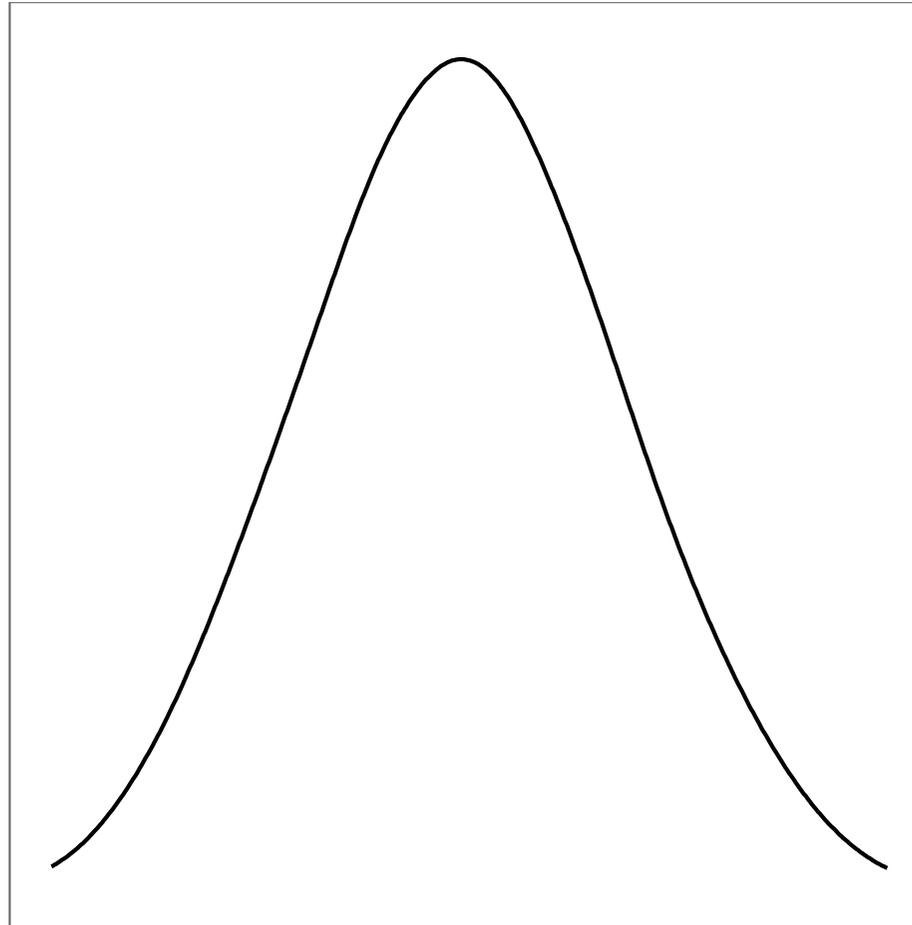

- *LPL*
- *TRIB1*
- *APOA5/A4/C3/A1*
- *ANGPTL4*

Kathiresan *Nature Genetics* (2009)  
Samani *Nature Genetics* (2011)  
Deloukas *Nature Genetics* (2013)  
Nikpay *Nature Genetics* (2015)

## Polygenic risk score:

Measure of inherited risk for coronary disease

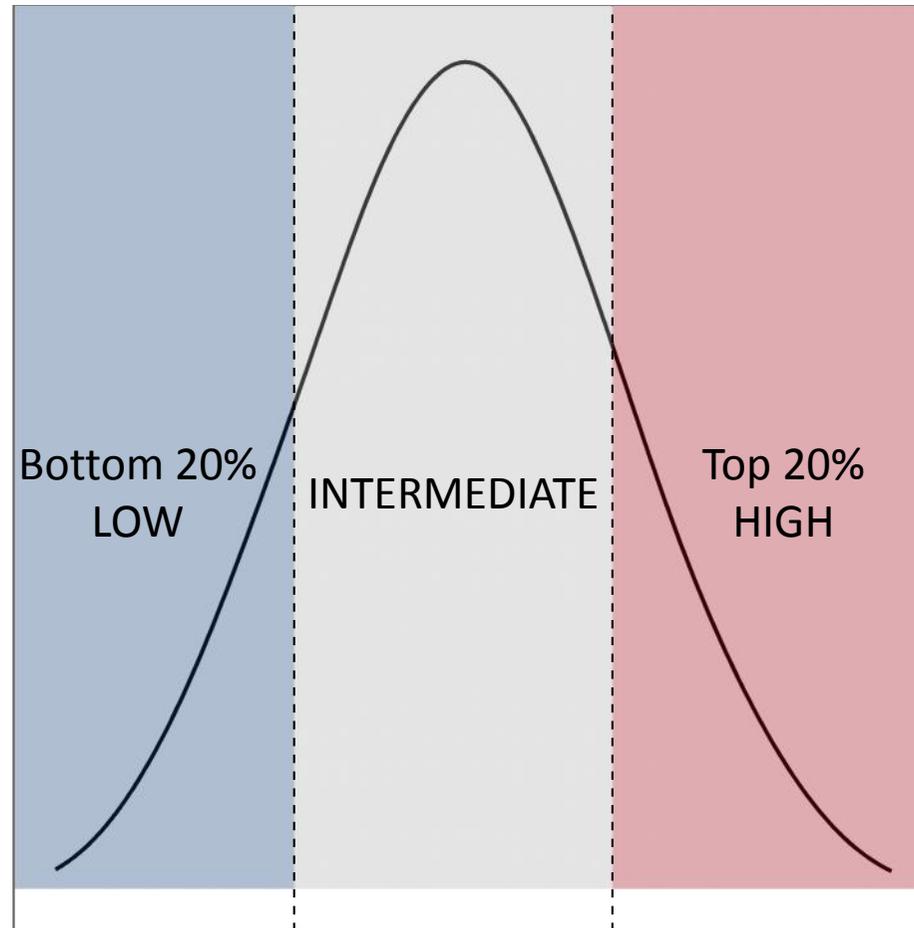

---

**Polygenic Risk Score**

# Polygenic risk score: Divide population into genetic risk groups (low, intermediate, high)

---

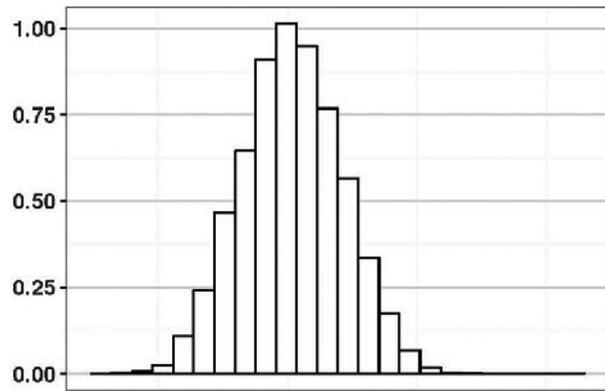

**Polygenic Risk Score**

# Building a polygenic risk score using 50 variants: Distribution in > 50,000 individuals

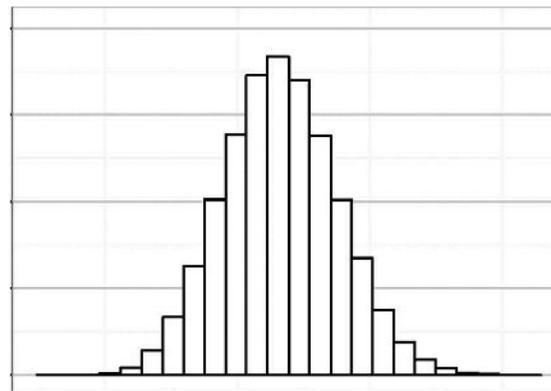

---

**Atherosclerosis Risk  
in Communities  
(N = 7,814)**

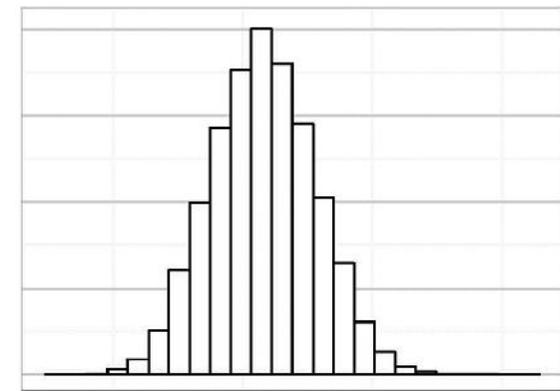

**Polygenic Risk Score**

**Women's Genome  
Health Study  
(N = 21,222)**

**Polygenic Risk Score**

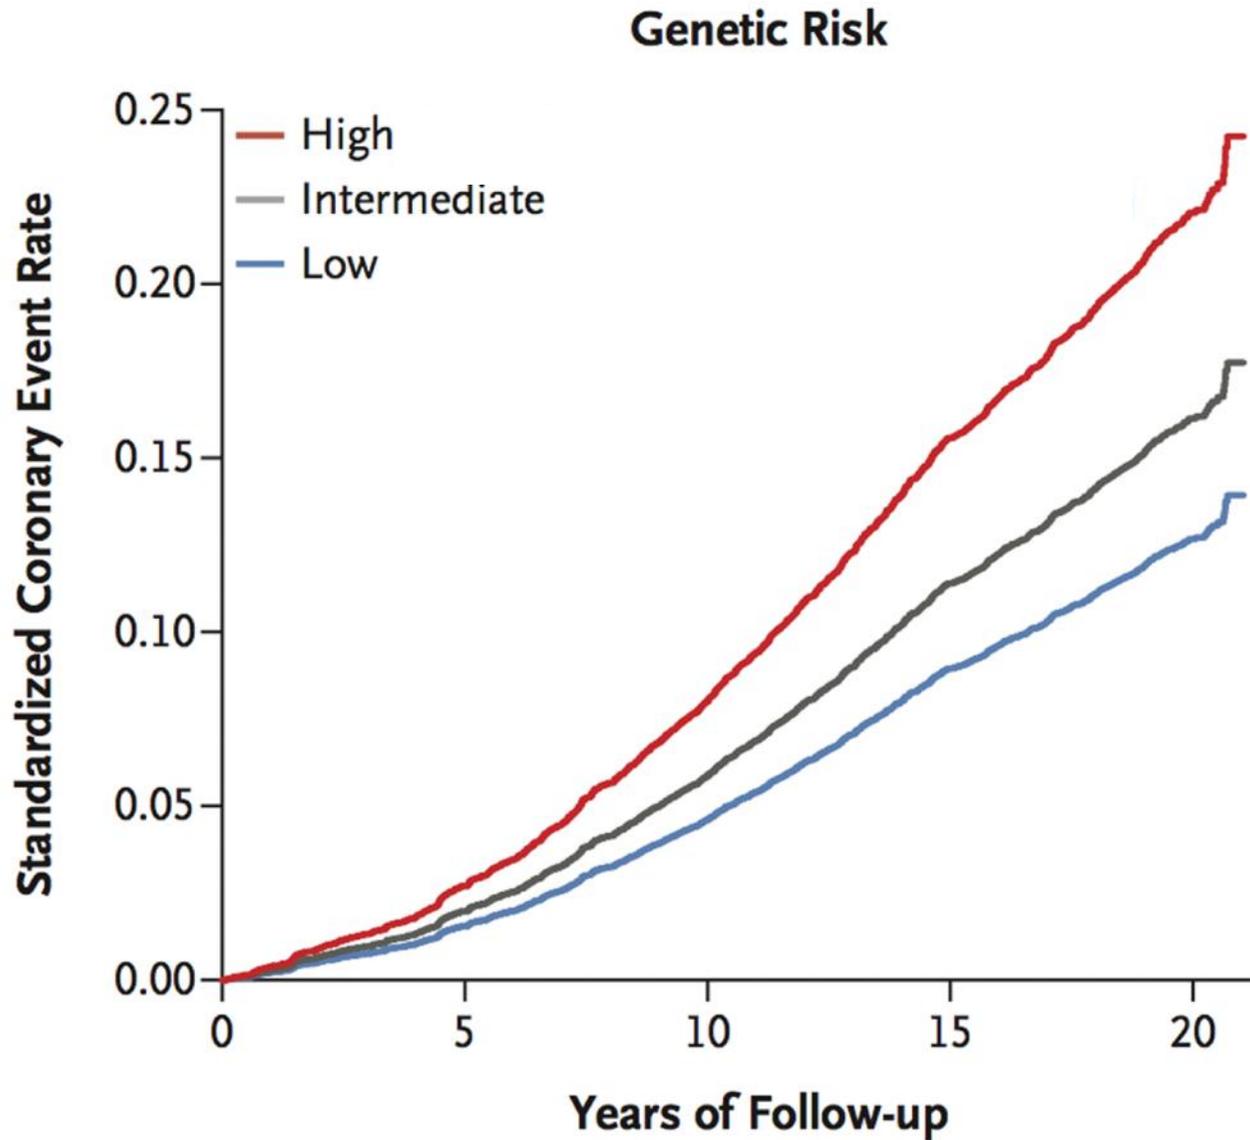

**Malmö Diet and  
Cancer Study  
(N = 22,389)**

**Polygenic Risk Score**

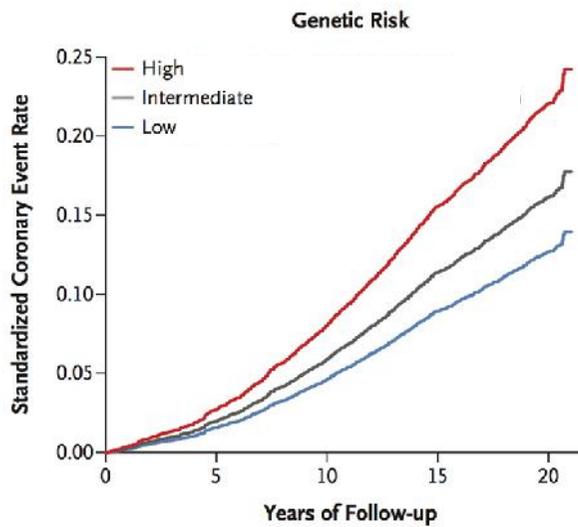

# High genetic risk      91% higher event rate

---

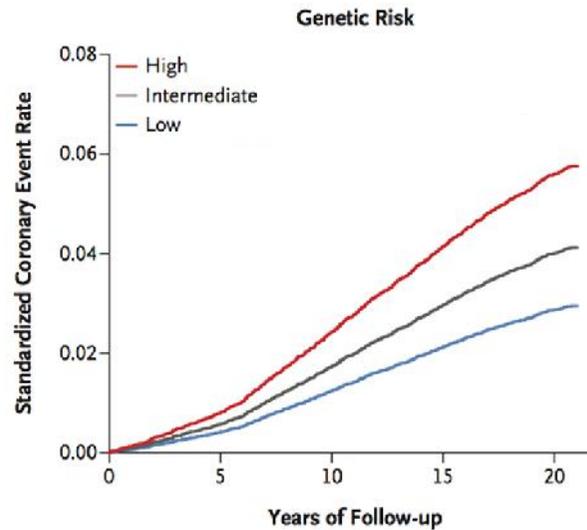

# High genetic risk 91% higher event rate

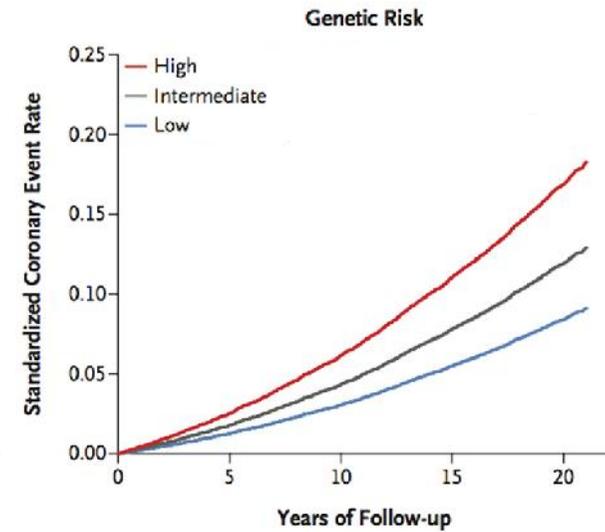

### Atherosclerosis Risk in Communities

### Women's Genome Health Study

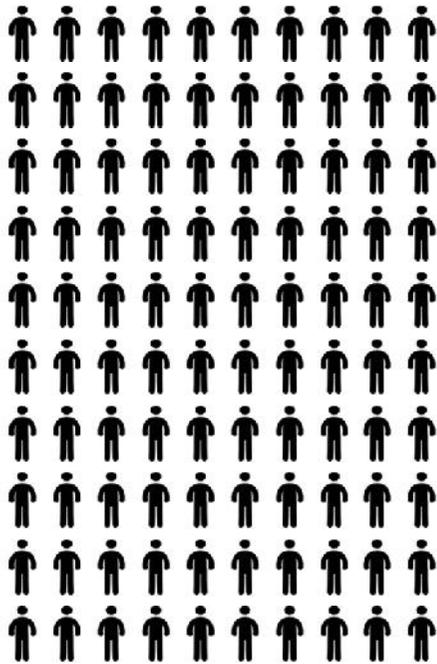

### Malmö Diet and Cancer Study

# Clinical interpretation of genetic testing for heart attack risk; where do we stand in 2017?

100 patients with myocardial infarction

Monogenic risk

↑ Risk

3-fold

Polygenic risk

2-fold

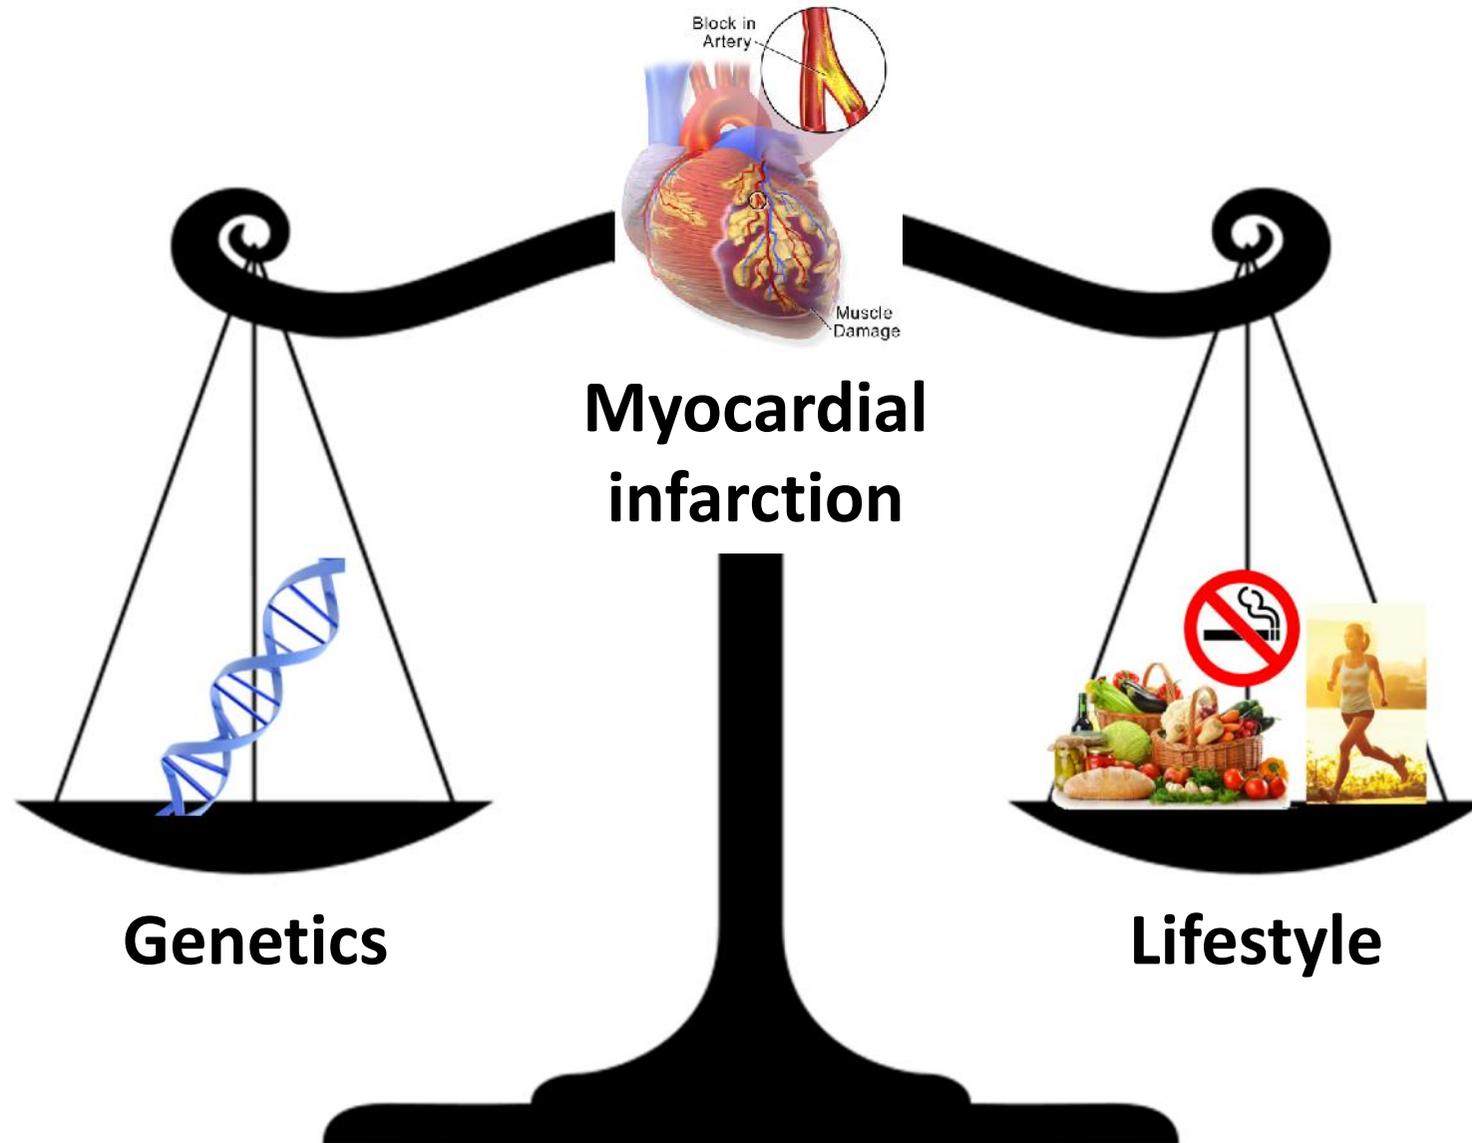

Monogenic & polygenic

6-fold

# To what extent can a **healthy lifestyle** offset inherited risk of myocardial infarction?

---

# Nurses Health Study: N Eng J Med, 2000

---

## PRIMARY PREVENTION OF CORONARY HEART DISEASE IN WOMEN THROUGH DIET AND LIFESTYLE

MEIR J. STAMPFER, M.D., FRANK B. HU, M.D., JOANN E. MANSON, M.D., ERIC B. RIMM, Sc.D.,  
AND WALTER C. WILLETT, M.D.

**Most favorable lifestyle (3% of women)  
associated with 83% decrease in coronary risk.**

# Building a healthy lifestyle score:

---

No current smoking

Avoiding obesity

Regular exercise

Healthy diet

## Favorable lifestyle

3-4 healthy lifestyle factors

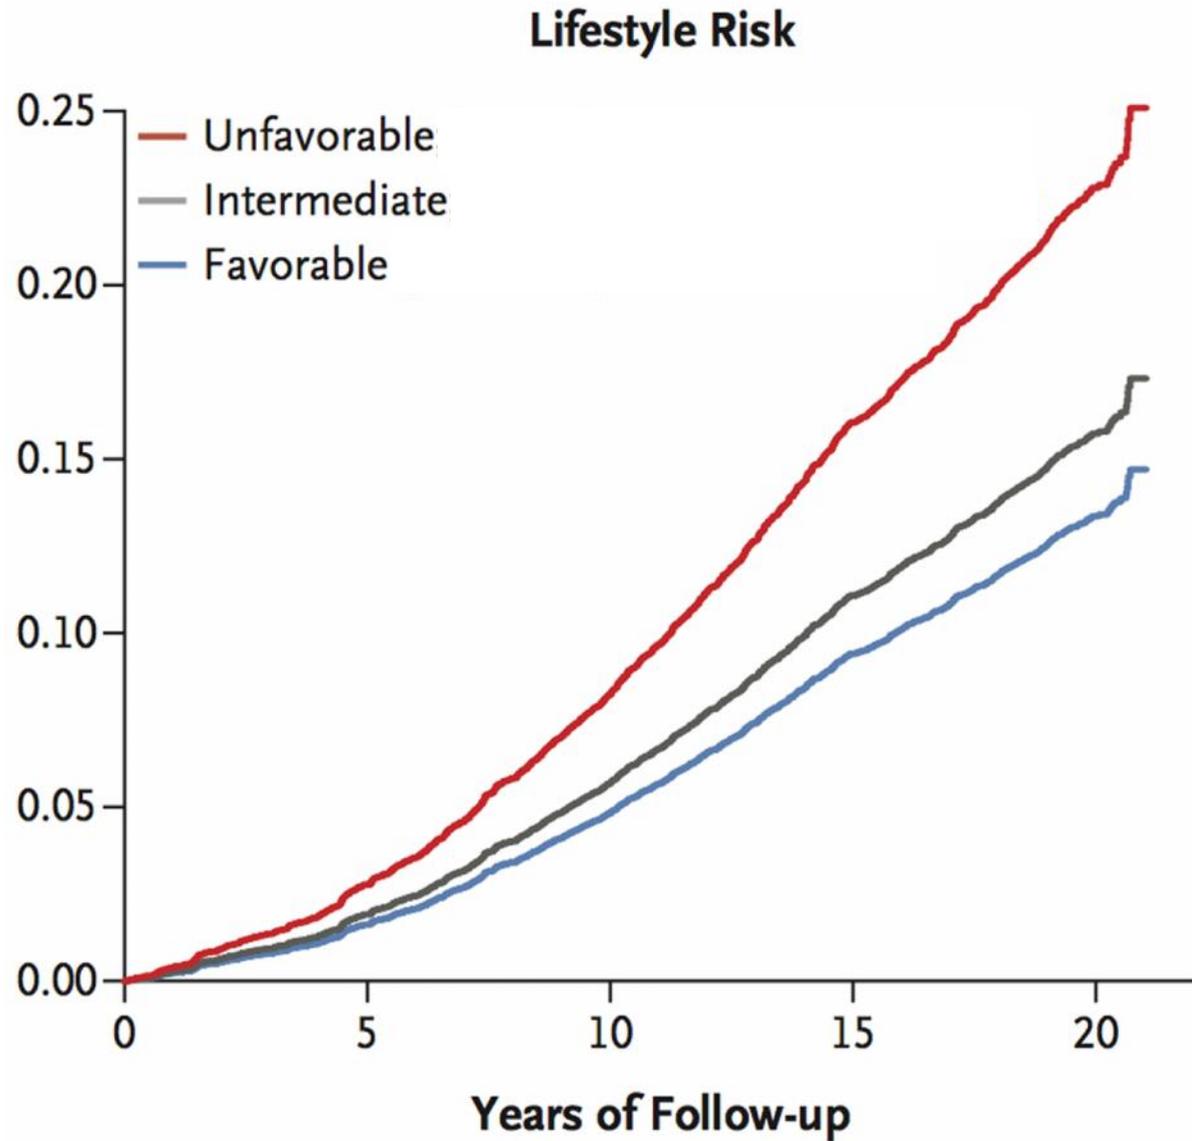

## Intermediate lifestyle

2 healthy lifestyle factors

## Unfavorable lifestyle

0-1 healthy lifestyle factors

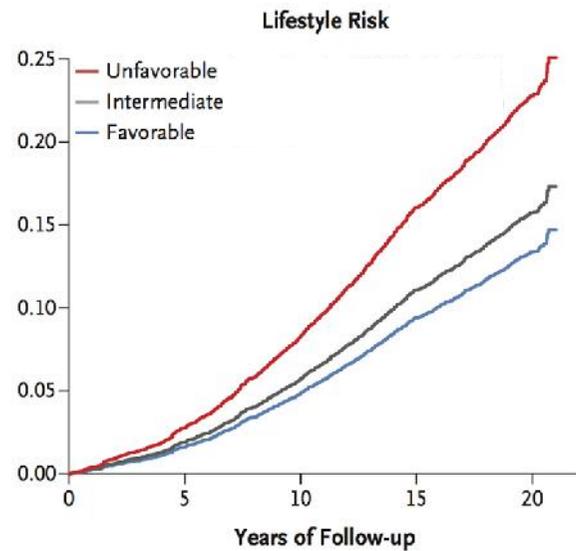

# Favorable lifestyle 50% lower event rate

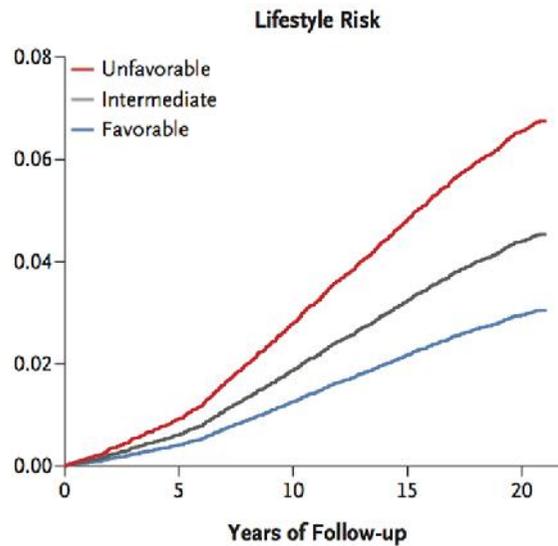

# Favorable lifestyle

# 50% lower event rate

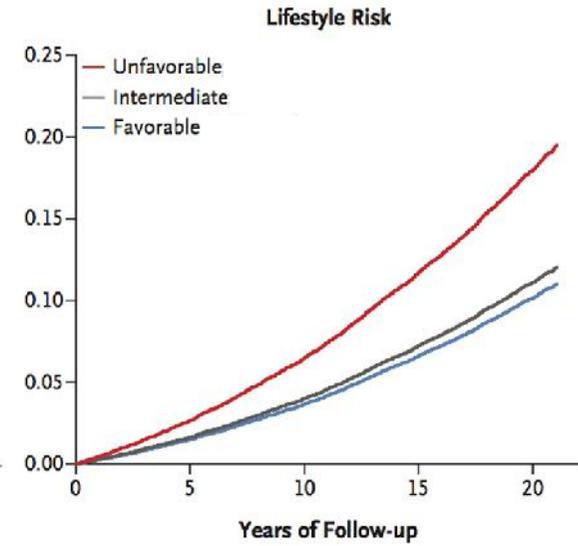

### Atherosclerosis Risk in Communities

### Women's Genome Health Study

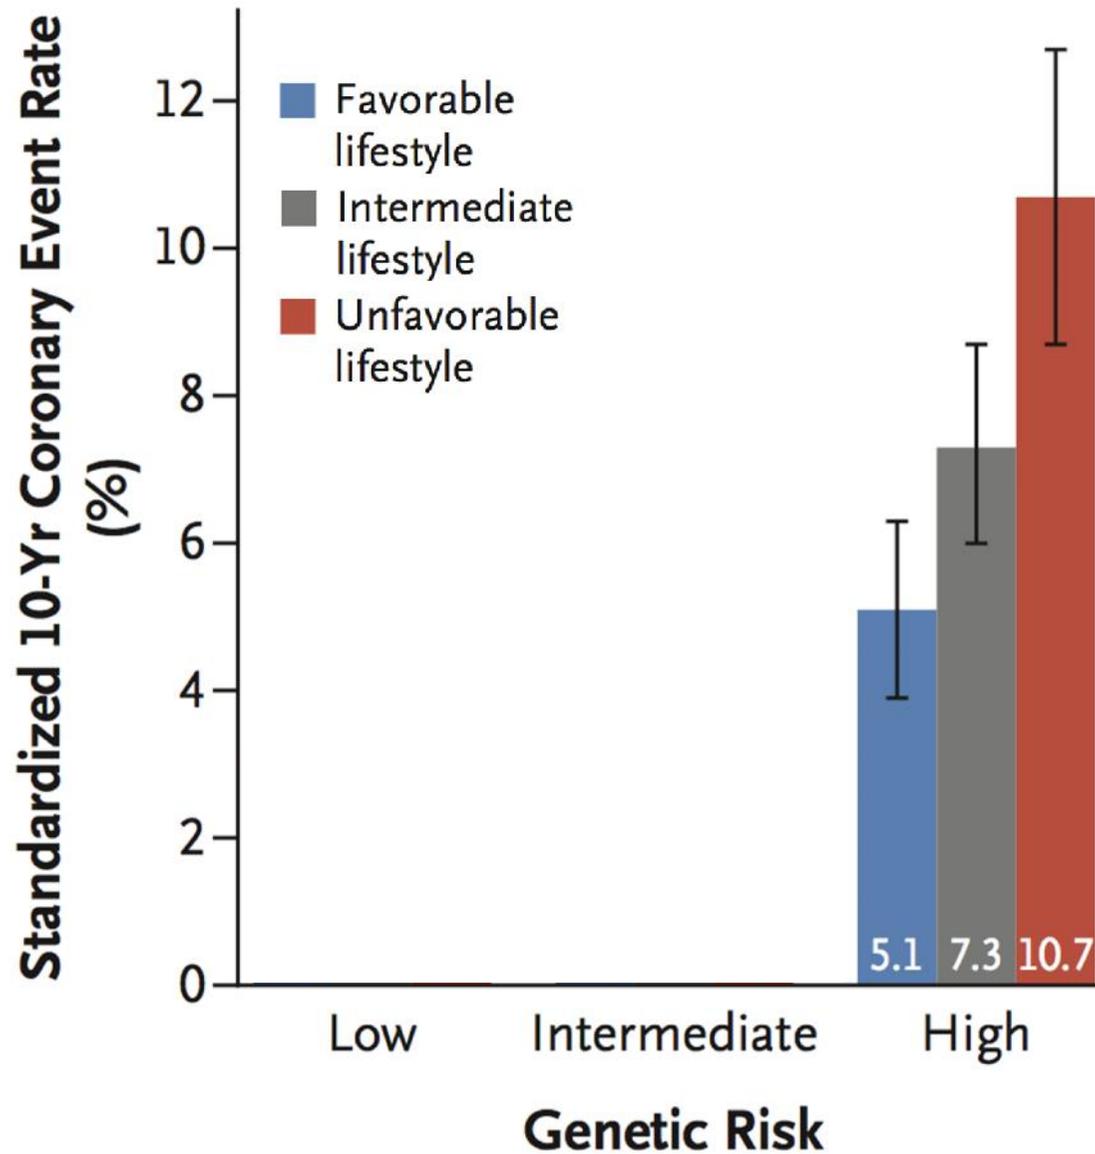

### Malmö Diet and Cancer Study

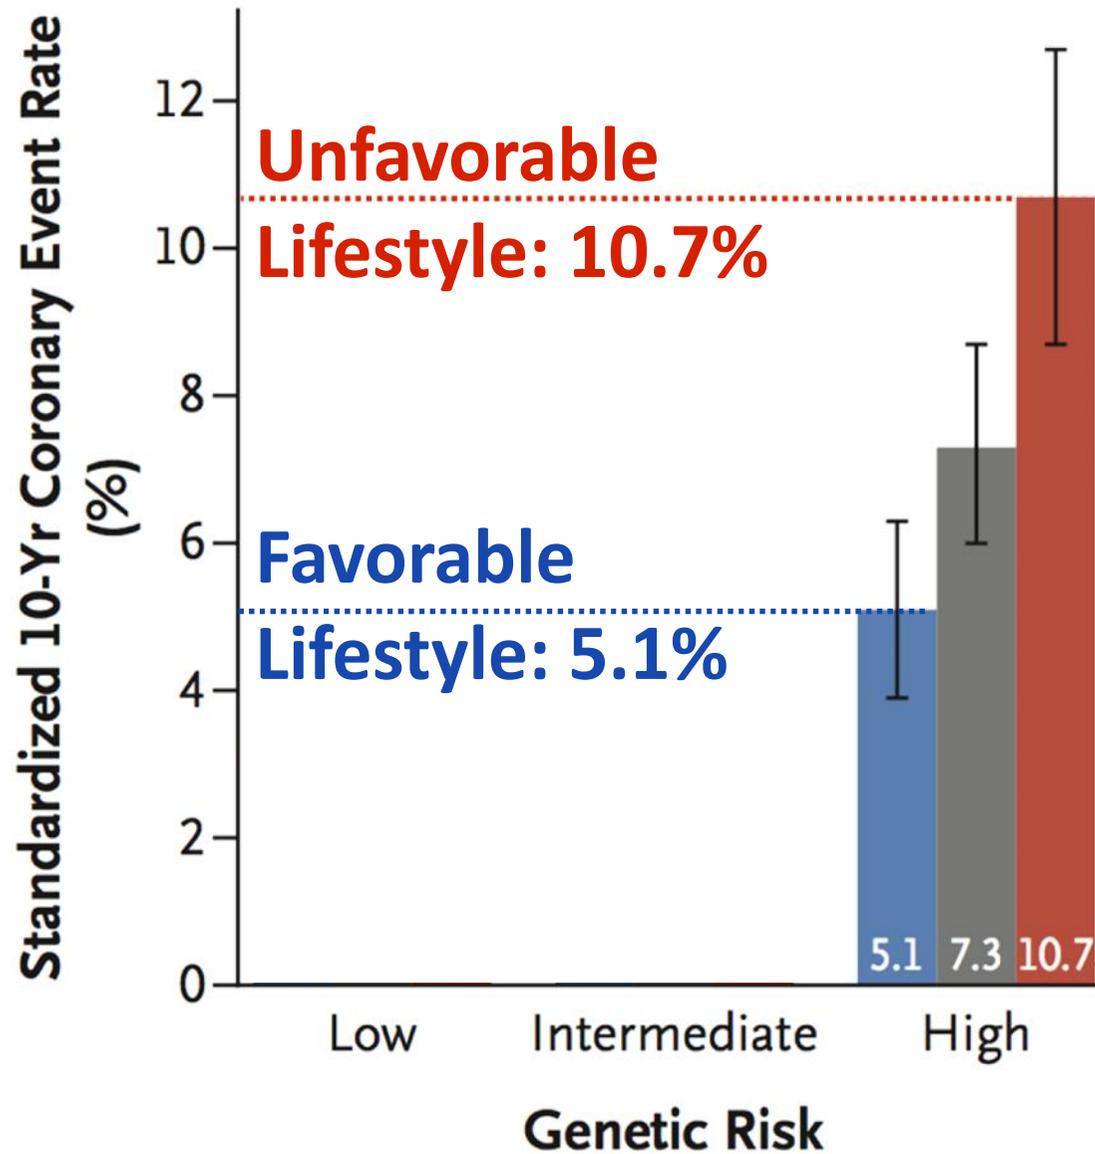

# Among high polygenic risk individuals, favorable lifestyle decreases risk by $\approx 50\%$

---

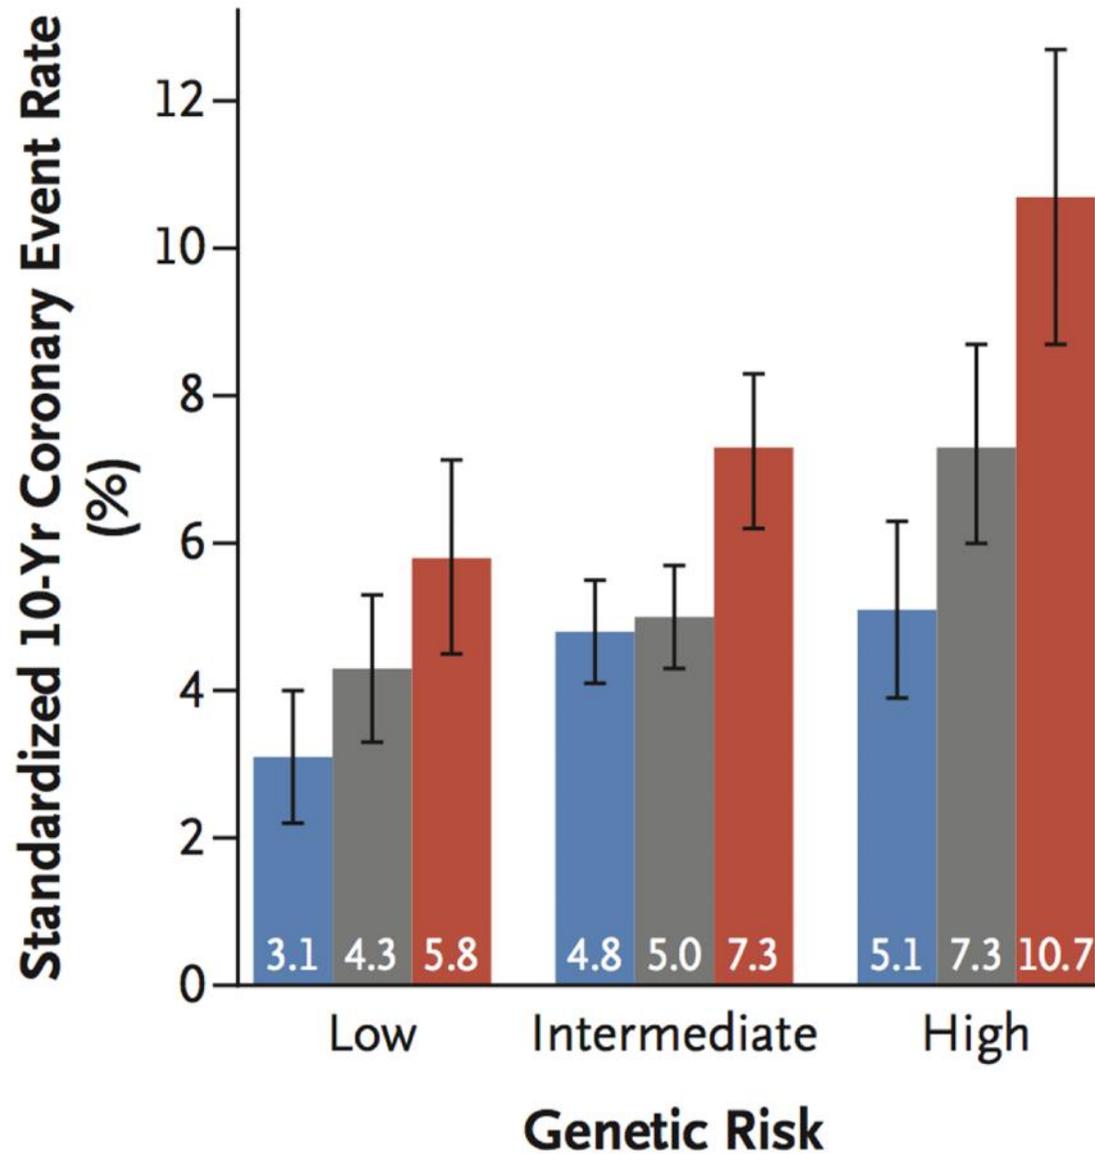

Among high polygenic risk individuals,  
favorable lifestyle decreases risk by  $\approx 50\%$

---

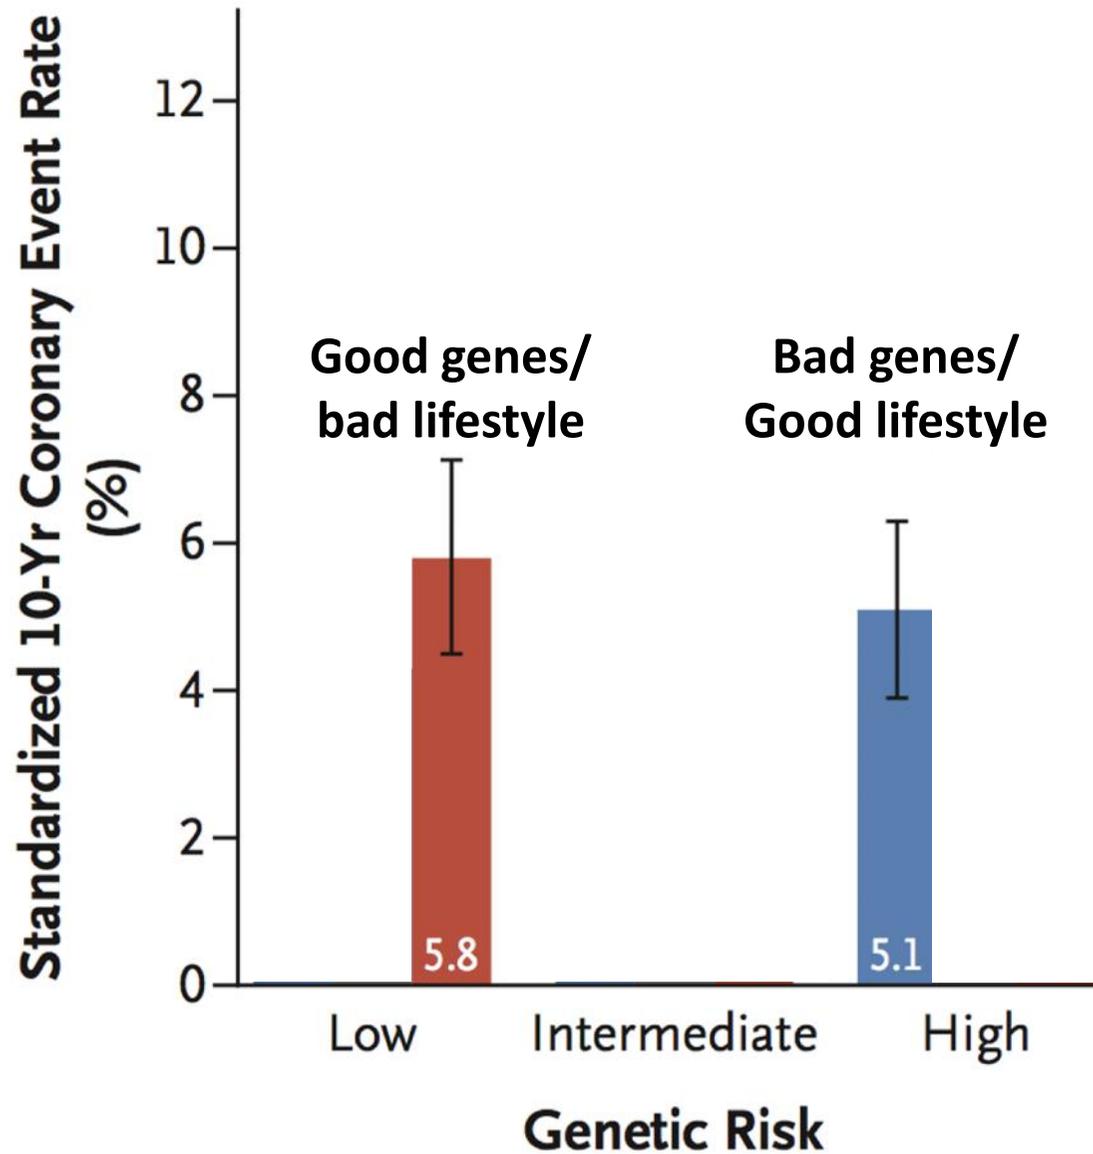

**Among high polygenic risk individuals,  
favorable lifestyle decreases risk by  $\approx 50\%$**

---

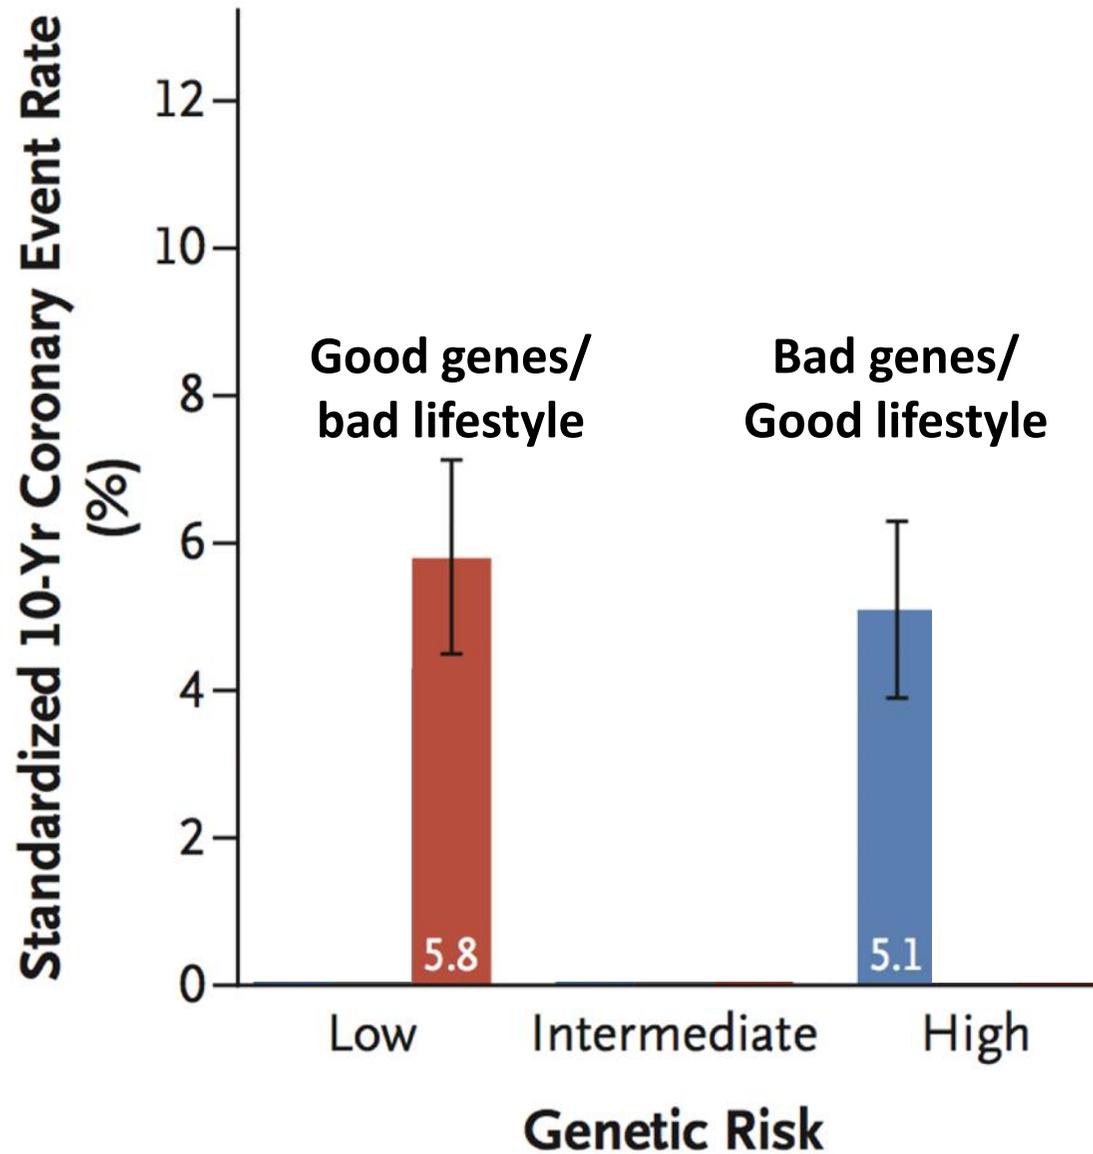

# Good genes / bad lifestyle $\approx$ bad genes / good lifestyle

---

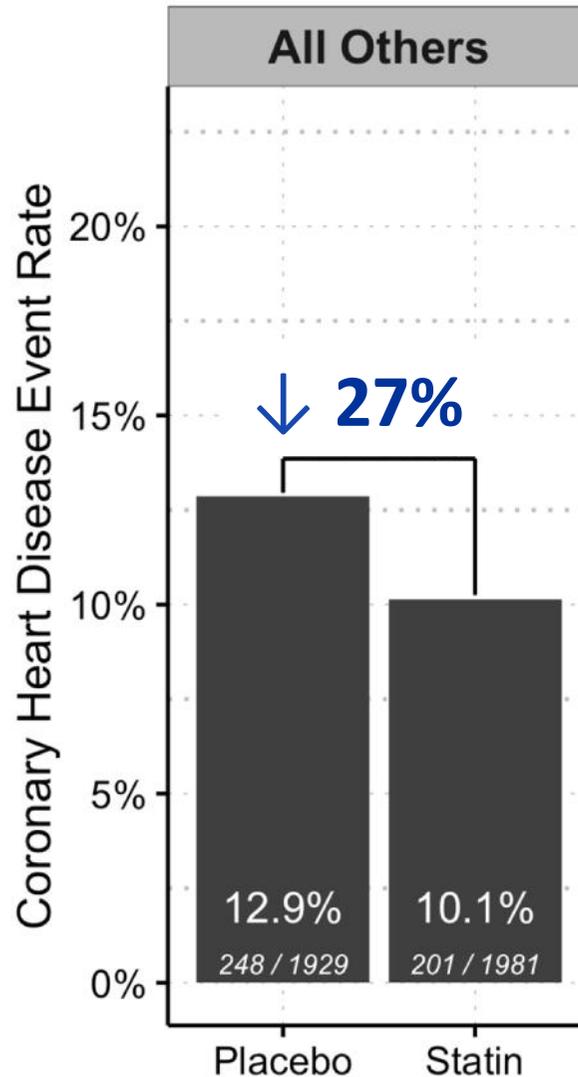

# Good genes / bad lifestyle $\approx$ bad genes / good lifestyle

---

# Among high polygenic risk 1° prevention group, statins **44% decrease in coronary risk**

---

**To what extent can inherited risk of myocardial infarction be offset by lifestyle or statin therapy?**

---

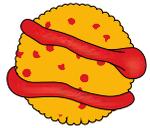

**DNA is not destiny.**

Among those at high genetic risk,  
both healthy lifestyle and statin therapy  
**40-50% reduction** in myocardial infarction.

# Human genetics can **stratify** the population to guide **targeted** therapy for myocardial infarction

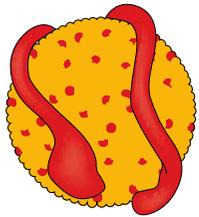

---

## Monogenic risk (5%)

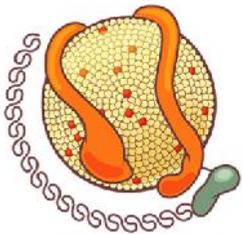

Familial hypercholesterolemia

→ **Statin, ezetimibe, PCSK9i**

Triglyceride clearance

→ **APOC3 inhibition**

Increased lipoprotein(a)

→ **ASO Lp(a) inhibitor**

## Polygenic risk (30%)

### Lifestyle

*NEJM* 2016

### Medications

*Lancet* 2015  
*Circulation* 2017

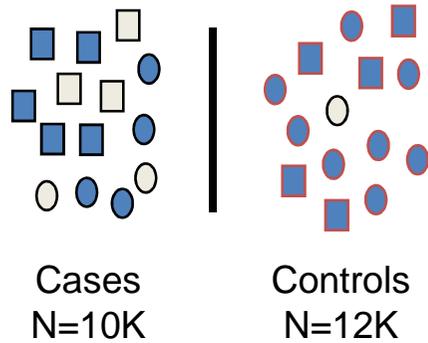

# Healthy Lifestyle Factor Criteria

Healthy Lifestyle Factor	Criteria
Absence of Current Smoking	<b>No current smoking</b>
Absence of Obesity	<b>BMI &lt; 30 kg/m<sup>2</sup></b> at baseline examination
Regular Physical Activity	Self-reported physical activity <b>≥ once/week</b>
Healthy Diet	<p>At least 5 of the 10 characteristics:</p> <ul style="list-style-type: none"> <li><b>Fruits:</b> ≥ 3 servings/day</li> <li><b>Nuts:</b> ≥ 1 serving/week 3</li> <li><b>Vegetables:</b> ≥3 servings/day</li> <li><b>Whole grains:</b> ≥ 3 servings/day</li> <li><b>Fish:</b> ≥2 servings/week</li> <li><b>Dairy:</b> ≥ 2.5 servings/day</li> <li><b>Refined grains:</b> ≤ 1.5 servings/day</li> <li><b>Processed meats:</b> ≤ 1 serving/week</li> <li><b>Unprocessed red meats:</b> ≤ 1.5 servings/week</li> <li><b>Sugar sweetened beverages:</b> ≤1 serving/week</li> </ul>

# Rare variant burden signals in 9 genes

## Sample size

## Exome sequencing

	Gene	Carrier Frequency	Odds Ratio for MI
<b>Risk</b> ↑	LDLR	1 in 221	≈ 4
	LPL	1 in 249	≈ 2
	APOA5	1 in 216	≈ 2
<b>Protective</b> ↓	LPA	1 in 285	≈ 0.8
	NPC1L1	1 in 650	≈ 0.5
	ANGPTL4	1 in 360	≈ 0.5
	APOC3	1 in 150	≈ 0.6
	ASGR1	1 in 120	≈ 0.7
	PCSK9	1 in 50 (Blacks)	≈ 0.2

**Background: Both genetic and lifestyle factors contribute to individual-level risk of coronary disease**

---

“... in the future the **fatalism** concerning the familial inheritance of disease **will be dispelled** ... through the application of **preventive measures** ... There may then come true the quotation from Shakespeare...Our **remedies oft in ourselves do lie.**”

Paul Dudley White, MD  
NEJM, **1957**
