Title

Doggy Adopt (APP)

Author

Iñaki Martínez Urdaci

Description

With the aim of trying to improve the actual dog's/pet's shelters situation, Doggy Adopt app is now launching. With an innovative service that enhances the possibilities for shelters to provide a better service and consequently improving the adoption system that is currently available, this app aims to become the ultimate tool for volunteers and people wanting to adopt.

Comments

Doggy Adopt works parallel to Instagram or any social network out there. Each shelter will have their own profile with individual posts. Each of these posts will be a dog profile that will contain media (photos, videos...) and the information linked to that dog (size, weight, hair length, personality...). Despite the homogenization that these shelter dogs tend to suffer, they deserve a chance of being seeing as individual beings with their own characteristics and personality that made them unique.
