

# Master in Economics and Finance

**EMPLOYMENT  
REPORT  
2020-2022**

# 01. THE MASTER'S DEGREE

The master's degree in Economics and Finance (MEF) from the University of Navarra is an official master's degree recognized by the National Agency for Quality Assessment and Accreditation (ANECA), with 60 ECTS entirely taught in English. It provides students with the necessary analytical foundations for entering into a PhD program, international public policy institutions and corporations looking for rigorously trained specialists.

The students will:

- Gain specialized and multidisciplinary advanced training, aimed both at promoting research as well as a professional specialization.
- Study the major concepts and techniques of mathematical analysis, probability and statistics, which are required in the areas of economics and finance.
- Develop the main ideas and techniques necessary for the analysis of general equilibrium modeling.
- Appropriately use the econometric techniques employed in financial time series modeling and microeconomic analysis.
- Handle the main statistical and econometric software used in the areas of economics and finance such as R, Python, Matlab among others.
- Study and deepen knowledge in recent macroeconomic models with neoclassical features, namely, the study of general dynamic equilibrium models.
- Understand the fundamentals of modern financial theory through discrete-time models, examining the decision-making process during uncertainty within an intertemporal framework, the theory of mean and variance, the theory of arbitration and the incorporating of data into the decision-making process.
- Examine the concept of market risk using different models for their evaluation.

## 02. MEF PROMOTIONS 2020 -2022

---

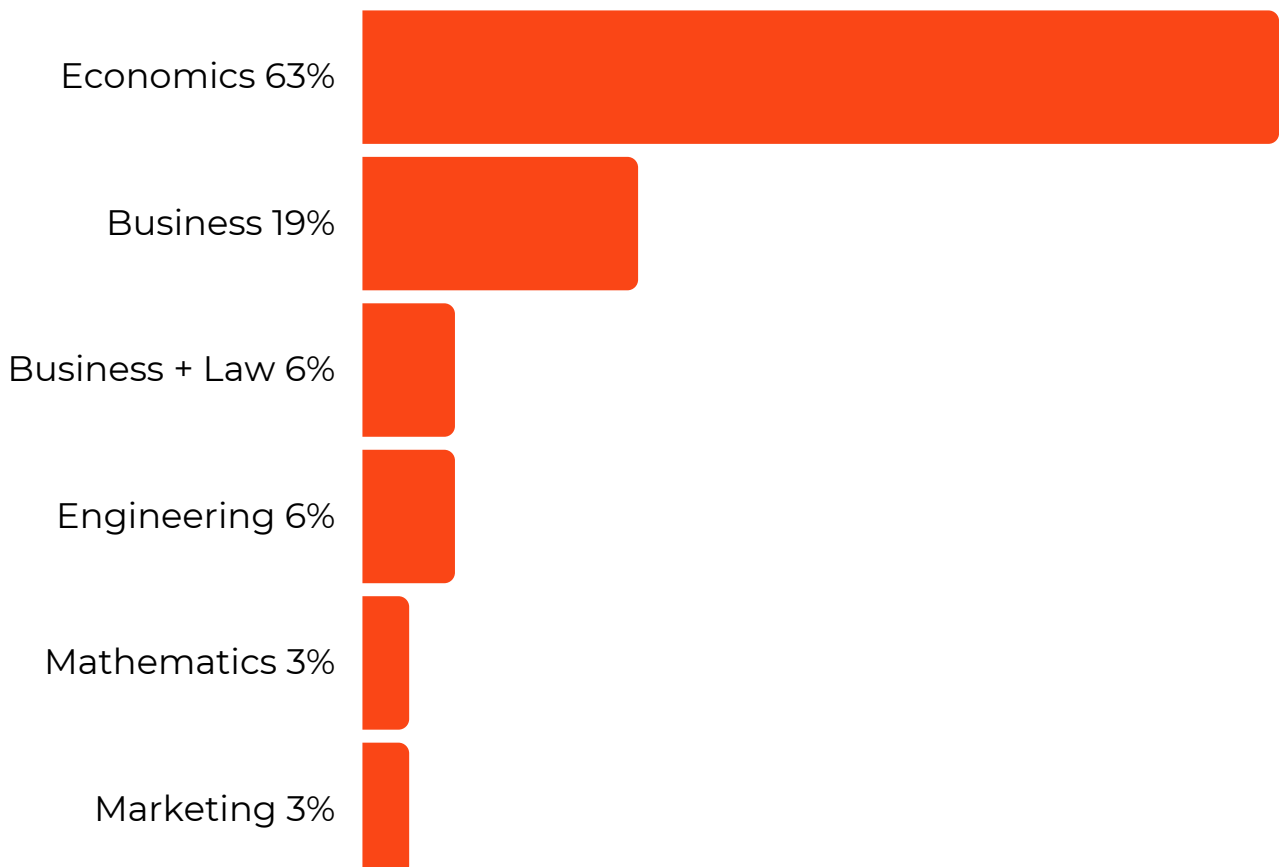

The program aims both to provide a current and solid theoretical base and to develop the analytical skills needed for practical work and research. In this way, students are familiarized with the design, analysis, and empirical comparison of theoretical models. The study of mathematical and econometric techniques will allow students to undertake their work with the necessary rigor.

The 2020-2022 promotions are composed of:
